SUMMARY

Senior Software Engineer with 5+ years of experience building and scaling high-throughput full-stack systems using Node.js, React.js, Next.js, PostgreSQL, and AWS. Currently working on distributed, event-driven architectures processing millions of events daily with strong guarantees around reliability and latency. Strong backend focus on RESTful APIs, data modeling, and asynchronous systems, complemented by experience building high-performance React/Next.js applications. Experienced in fintech and high-volume transactional systems, with a focus on data integrity, scalability, and production reliability.

WORK EXPERIENCE

Senior Software Engineer — Eventbrite, Hyderabad

Sep 2025 – Apr 2026

- Designed and built Notification Center with Braze integration, delivering 200k+ impressions (~6% CTR, ~14% for critical flows).
- Architected and scaled event-driven backend systems on AWS, enabling high-throughput, near real-time processing with strong guarantees around reliability, latency, and system resilience.
- Led system design across cross-functional teams, translating business and product requirements into scalable backend systems aligned with customer and analytics needs
- Designed asynchronous ETL and SSR data pipelines processing millions of events per day, enabling reliable analytics and business reporting with strong guarantees around idempotency, retries, and failure recovery
- Developed and maintained a reusable React component library supporting legacy and micro-frontend systems, improving UI consistency and reducing integration effort across teams.
- Migrated email delivery from SparkPost to Braze using Nomad and SQS, improving reliability of async processing.
- Designed and optimized SQL/NoSQL data access patterns and data models, improving query performance and enabling efficient analytics on large-scale datasets
- Improved observability by migrating Datadog → CloudWatch and integrating PagerDuty, reducing incident response time.
- Designed secure and compliant media workflows using S3 access controls, CDN integration, and malware protection (GuardDuty) for third-party integrations.
- Led code reviews and mentored junior engineers, driving best practices in system design, testing, and maintainability.
- Designed and operated distributed, near real-time systems handling high-throughput asynchronous workflows, ensuring reliability under partial failures, retries, and unpredictable system conditions.
- Integrated AI-assisted development (Copilot, ChatGPT, Cursor, Claude) into daily workflows for test generation, debugging, and rapid prototyping, significantly improving development velocity and iteration speed across full-stack features.

Software Engineer II — Eventbrite, Hyderabad

Jul 2023 – Sep 2025

- Built and optimized high-traffic consumer surfaces (Homepage, City Browse, Editorial), improving performance and engagement.
- Improved Core Web Vitals (LCP) by implementing server-side caching and optimizing rendering paths, significantly improving page load performance and SEO rankings.
- Led revamp of high-traffic category pages (Dating, Independence Day), building reusable components and optimizing entry points, driving 700K+ page-level and 65K+ collection-level conversions.
- Owned on-call, resolving production issues and ensuring system reliability.

- Drove A/B experiments and growth features across core consumer surfaces, improving content discoverability and user engagement in collaboration with Product and Marketing teams.
- Collaborated closely with product and design teams to rapidly deliver user-facing features.
- Owned end-to-end full-stack systems, building scalable REST APIs and responsive React applications while ensuring high performance, reliability, and production readiness.
- Maintained and enhanced existing Terraform infrastructure, and contributed to migrating portions of infrastructure provisioning toward AWS CDK (JavaScript-based IaC) for improved developer experience and maintainability.

Full Stack Engineer — iTinker, Chandigarh

May 2021 – Jul 2023

- Built and scaled FRS platform to 100K+ users within the first month.
- Led a team of 5+ engineers; improved performance via Redis caching (~35% DB load reduction).
- Designed scalable, high-performance backend services using Node.js (Express/NestJS) and Golang, with PostgreSQL/MongoDB for efficient data modeling and query optimization.
- Designed and built backend services for fintech and commerce platforms (MMTC), including cart, checkout, and payment workflows handling high-volume transactional data
- Architected scalable microservices integrating external payment gateways, supporting high-throughput transaction flows under peak load conditions
- Implemented Elasticsearch-based search and indexing for efficient query retrieval.
- Implemented comprehensive unit and integration testing (Jest, RTL) to ensure reliability, prevent regressions, and maintain high-quality production systems.
- Handled Web, App and backend using react, react native, go, elastic search for a project.
- Built Terraform-based infrastructure automation scripts for provisioning AWS resources (EC2, ECS, EKS), including networking and security group configurations to support scalable deployments.

Full Stack Developer Intern — iTinker, Chandigarh

Feb 2021 – Apr 2023

- Developed and maintained the iTinker website (frontend and backend), implementing responsive design and scalable architecture.
- Enhanced and optimized admin panel functionality, improving performance and user experience.

PROJECTS

Real-time Voice AI Agent (Pipecat + Qwen TTS)

- Built a low-latency voice assistant pipeline integrating STT → LLM → TTS for real-time interaction
- Implemented streaming audio processing and frame-based pipeline using Pipecat
- Deployed GPU-based inference setup to optimize response latency and performance
- Debugged and resolved audio pipeline issues (input capture, frame sync, output routing)

EDUCATION

Master of Computer Applications, Panjab University, Chandigarh

2019 – 2022

SKILLS

- **Backend & Cloud:** AWS (Lambda, API Gateway, SQS, EventBridge, SNS), Docker, Terraform, Kafka
- **Languages:** TypeScript, JavaScript, NodeJS, Python, Go, NestJS
- **Frontend:** React, React Native, Next.js, Tailwind
- **Datastores:** MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, Elasticsearch, Snowflake
- **Observability:** CloudWatch, Datadog, PagerDuty, Sentry
- **Testing:** Jest, React Testing Library, Cypress
- **CI/CD:** Jenkins, GitHub Actions
